SUMMARY

Full-Stack Developer with 1+ year of experience building and maintaining a production multi-tenant HRMS SaaS using Vue 3, Nuxt 3, React, Next.js, Laravel, and MySQL. Delivers features end to end: requirement analysis, REST/JSON:API development, database design, and optimization. Strong in reusable component design and tenant-scoped data validation.

EXPERIENCE

Appfoster **April 2026 – Present**
Associate Software Engineer *Noida, Uttar Pradesh*

- Build and maintain a production multi-tenant HRMS SaaS (Nuxt 3, Vue 3, Pinia, React, Next.js, Laravel, JSON:API, MySQL/MariaDB) covering employee management, leave, holidays, attendance, time tracking, and payroll.
- Built an organization-wide data completeness report: missing-field detection, filtering, sorting, pagination, Excel/PDF export, and bulk reminder notifications with last-reminder tracking.
- Built tenant management features in the HRMS operations dashboard (React, Next.js, Laravel JSON:API): edit tenant details and view per-tenant employee counts.
- Implemented an automated subscription lifecycle: "Due" badge as a plan nears expiry, "Overdue" for 3 days after expiry, then automatic tenant account suspension.
- Developed a support ticketing workflow: tenants submit issues with severity (Critical/High/Medium/Low), which are received in the Ops dashboard for review, reply, and acknowledgment.
- Engineered a localized AI content-generation feature using Vue/Nuxt, Laravel, and LLM, with a key-based prompt architecture that auto-populates form fields in each user's preferred language.
- Built reusable Vue components removing duplicated code across multiple modules and optimized APIs and database queries, reducing response time by 90% on Employee working day Report.
- Implemented tenant-scoped validation to block unauthorized cross-tenant operations and protect organizational data.
- Own the full feature lifecycle: requirements, implementation, debugging, pull requests, and coordinated dev/production releases with senior code review.

Anyintech **Jan 2025 – Jul 2025**
Backend Developer Intern *Bengaluru, Karnataka*

- Built backend modules in Java, Spring Boot, Spring MVC, Hibernate, and MySQL using a layered architecture.
- Implemented product features: category filtering, search, and image uploads.
- Set up GitHub-to-Render auto-deployment (CI/CD).

PROJECTS

E-Commerce Management System | *Java, Spring Boot, Spring Security, Hibernate, MySQL* **Dec 2025 – Feb 2026**

- Built role-based authentication and authorization, product CRUD and image uploads, admin user management, order processing, email notifications, and secure password reset.
- Deployed on Render with GitHub-triggered automatic deployment.

REST-Based Job Portal Backend System | *Java, Spring Boot, Hibernate/JPA, MySQL* **Nov 2025**

- Developed REST APIs for job-listing CRUD and search operations using layered architecture; tested endpoints with Postman.

TECHNICAL SKILLS

Languages: Java, PHP, JavaScript, SQL
Frontend: Vue.js, Nuxt 3, React, Next.js, Pinia, JavaScript (ES6+), HTML5, CSS3, Tailwind/Bootstrap
Backend: Laravel, Laravel JSON:API, REST APIs, Spring Boot, Spring MVC, Spring Security, Hibernate/JPA
Databases: MySQL, MariaDB, database migrations, query optimization
AI & LLM Integration: Google Gemini API, prompt engineering, prompt templating, multi-language (localized) output.
Tools & Practices: Git, GitHub, Postman, Render, API debugging, reusable components, multi-tenant data isolation, CI/CD fundamentals

EDUCATION

Marwadi University (MEFGI) **2021 – 2025**
B.E. in Computer Science and Engineering — ***CGPA: 7.89/10*** *Rajkot, Gujarat*

CERTIFICATIONS

Java Full Stack Developer – CODEZERIA (Mar 2024 – Sep 2024) | Information Security Education Awareness – MeitY
